

What is an API?

An Application Programming Interface (API) is a software interface that allows applications to communicate (send and/or receive data) with each other.

What is LoanLIST?

LoanLIST is an application accessible on the FTA Portal within SBA's Capital Access Financial System (CAFS). It provides investors access to data to enable research of current loan information and recent payment history.

The LoanLIST API can be used in tandem with the LoanLIST application to retrieve loan details and payment information.

What are the benefits of using an API?

APIs enable automation of workflows that help achieve greater productivity. They reduce manual operations for users and provide easier systematic access to data.

Additionally, the LoanLIST API is not restricted to displaying 700 loans as the application is, therefore enabling viewing and research of a greater number of loans at once.

How do I get an API?

API Onboarding Process

The Intercompany Service Agreement (ISA) Form can be found on the Wiki using [this link](#) and should be filled out and signed by the Vendor. The ISA sets the ground rules for accessing SBA 7a data.

Vendors then submit their completed ISA Form to system owner Ron Whalen (Ronald.Whalen@sba.gov) and Timalyn Franklin (Timalyn.Franklin@sba.gov) at SBA's Office of Performance and Systems Management (OPSM).

OPSM reviews and signs the ISA, and it is uploaded to SBA's Partner Information Management System (PIMS). The approved Vendor will receive a Partner ID, Vendor Software name, and Vendor Software ID

You will receive a comprehensive guide after submitting a signed ISA which covers subsequent onboarding steps in detail
